PROFILE

Software Engineer based in Indonesia with a deep focus on backend development and system architecture. I specialize in building robust, high-performance applications using Java Spring Boot and PostgreSQL. My approach combines clean code principles with modern database management to ensure scalability and reliability. Currently expanding expertise in Fullstack development with React.js through professional internships.

EDUCATION

Open University, Facult of Science and Technology — Samarinda, Indonesia
Bachelor of Information Systems — 2024 - Present
Focused on software engineering, system analysis, business analysis, and project management — Major GPA: -

Ministry of Health Polytechnic of East Kalimantan — Samarinda, Indonesia
Bachelor of Health Promotion — 2022 – 2026
Major GPA: 3.71/4.00

Core Technologies	HTML, CSS, JavaScript, Java, SQL
Frameworks	React.js, Next.js, Tailwind CSS, Express.js, Nest.js, Spring Boot
Tools & Platforms	MySQL, PostgreSQL, MongoDB, Git, GitHub, Linux, Android Studio, Postman, Docker
Soft Skills	Problem-Solving, System Architecture Design, Team Collaboration

SOFT SKILLS

Problem Solving · Analytical Thinking · System Architecture Design · Team Collaboration · Communication · Adaptability · Time Management

EXPERIENCE

Junior – Full Stack Developer — Apr 2026 - Now
Borneo Digital Teknologi — *PPU, East Kalimantan*

- Developed and maintained web applications across both frontend and backend components to support internal and client-facing business needs.
- Built responsive and user-friendly interfaces using modern frontend technologies, while integrating RESTful APIs for seamless data communication.
- Developed backend functionality, including API endpoints, database operations, authentication, and business logic based on project requirements.

Frontend Developer Intern — Oct 2025 - Feb 2026
Minilemon Technology — *Surabaya, East Java (Remote)*

- Developing interactive and responsive user interfaces for edutech platforms using React.js.
- Collaborating with cross-functional teams to integrate RESTful APIs and ensure seamless data flow.
- Optimizing web performance and implementing modern UI/UX principles with Tailwind CSS.

PROJECTS

RENTAGO

A bike rental platform designed to streamline bicycle booking and rental management. Features include real-time bike availability checking, online booking, rental duration management, add-on services, and order tracking. Tech Stack: Laravel, React, TypeScript, Inertia.js, Tailwind CSS, MySQL.

PRIORITIX
A productivity-focused application designed to help users manage tasks and projects efficiently. Features include priority sorting, task progress tracking, and collaborative workspace management. Tech Stack: React, Tailwind, Express.js, MySQL.

NEONPOS
A business-focused application designed to streamline point-of-sale transactions and inventory management. Features include real-time stock updates, sales reporting, and secure transaction processing. Tech Stack: React, Tailwind, Express.js, MySQL.

NAFAYA SCINKARE
Nafaya Skincare E-commerce Platform is a custom-built digital marketplace designed to showcase and sell premium skincare products. The platform provides comprehensive product management capabilities including inventory tracking, stock monitoring, and sales analytics.
